ABSTRACT

The apex of environmental scanning with regard to competition can only be found in Porter’s Five Forces model, analysis of Strengths, Weaknesses, Opportunities and Threats (SWOT) analysis and Political, Economic, Social, Technological, Environmental and Legal (PESTEL) analysis. The problem in this study was that the failure to use and under-utilisation of the Five forces by banks has led to poor performance. The purpose of the study was to assess the application of the five forces model in terms of its benefits and limitations, and how it can be modified to cope with the Kenyan banking industry. A descriptive survey design was used and a triangulation of both quantitative and qualitative methods. A sample of 62 respondents was randomly selected from the stratified target population of top, middle and operational level managers in Cooperative Bank of Kenya and given questionnaires. The data was analyzed both qualitatively and quantitatively and processed through computer (SPSS) with special emphasis on the facts and emerging themes that addressed the research questions and the resulting correlation and regression analyses results presented, discussed and interpreted. This was a mixed methodology of descriptive and inferential statistics to establish the existing relationships between the independent and dependent variables. Based on the findings, this study concludes that there is a strong positive relationship shown by R value of 0.8 between Porter’s Five Forces model and the performance of Cooperative Bank of Kenya. It also concludes that the strength and effects of substitutes should not be ignored; competitors are significant in benchmarking, keeping the management on toes and increasing efficiency and effectiveness thus aiding in success and achievement of competitive edge through innovation; the Bargaining power of buyers within the banking industry is critical in terms of understanding the bank’s buyers and successfully meeting their demands as a way of retaining them and achieving high customer satisfaction for repeat sales; the Bargaining power of sellers apply to the banking industry was a factor to watch as increase in the cost of their services leads to an increase in the cost of services offered by Cooperative Bank and the quality of their services also such as assured security and clean working environment determines employee motivation and satisfaction. Threat of new entrants was found to apply to the banking industry and needed mitigation measures as stated in the recommendations of the study.
