ABSTRACT

The core prospect of the research under this assessment is to scrutinize the degree of
effect motivation schemes can impose on the general workforce and the accrued impact of such
schemes in relation to employee productivity. The current market niche in Kenya is dynamic and
robust in nature, due to the competitive environment and ongoing revolution in the commerce
industry. With an aim of fostering an energetic working environment most companies adopt
various strategies so that the ventures can attract and retain resourceful and skilled employees,
and cumulatively, remain a relevant figure in the competitive global economy. The electric
company, is mandated with the task of offering essential energy services, an important factor of
production in numerous sectors of the economy, hence appraising the labor force of such a
company is critical to ensure prompt and quality service. Driven by aligning features, KENGEN
as an organization appreciates the value of employee satisfaction and utilizes various integrated
approaches and models to strengthen the relationship between the work force fraternity and the
service output capacity. The research has been conducted by utilizing various approaches
including the predominant descriptive and deductive survey designs. After establishment of a
hypothesis, random and nonrandom sampling techniques were used to select the samples. The
data was obtained by issuing questionnaires to various employees of the company contracted in
different professional capacities. The results achieved from the research study will then be
projected by utilizing content analysis technique and comparative methodologies. The study
seeks to answer the impact of reward motivational schemes its effect on member of staff output
capacity as the environment created within the business venture is interlinked to service delivery,
customer satisfaction rates and revenue percentage generated.
