ABSTRACT

Discipline refers to a state of orderly conduct of an individual which is gained thorough training in self-control and in habits of obedience to socially approved standards of thought and action. Indiscipline or misbehavior in school seems to be on the rise although policies and school rules and regulations have been formulated at various levels. This study is aimed at investigating factors contributing to indiscipline in Baringo Secondary School students. Strategies employed by the teachers in dealing with indiscipline problems will also be explored. The study will also seek to determine whether there is gender difference with undisciplined students. The questions will be formulated to guide in the study. One of the questions is to seek to determine the causes and causes of indiscipline in the school. The second is investigating the various ways used to curb indiscipline in the school.

The assumption of this study is that the respondents will give the required information concerning the factors contributing to indiscipline in schools; it will also be assumed that the sampled school experience discipline related problems and that teachers have discipline leading mechanisms. Literature concerning the problem will be examined with a view of filling the gaps existing. The study will employ descriptive survey design; stratified random sampling will be adopted since the study will attempt to represent key subgroups of the population. The instrument of data collection will be questionnaires constructed and administered by the researcher. Out of the population of about 120, a sample of 400 will be selected. Data analysis will be done using discipline statistics. Factors contributing to indiscipline will be analyzed and report based on the findings will be written. Factors contributing to indiscipline will be analyzed and a report based on the findings will be written. Recommendations for, minimizing or controlling indiscipline based on the factors listed will be made.
