## **ABSTRACT**

Emali being a town along the Nairobi – Mombasa highway has a higher prevalence of HIV/AIDS compared to its environs. This is mainly because it acts as a stopover for long distance truck drivers. Many young men are involved in siphoning oil from Lorries. There is a lot of promiscuity. The purpose of this study is to investigate the factors influencing teachers' and pupils' perceptions on HIV in Emali. The study objectives are: To investigate the teachers' perceptions on the impact of HIV/AIDS in Emali, to examine the pupils' perceptions on the impact of HIV/AIDS in Emali and to determine the factors influencing both teachers and pupils perceptions on HIV/AIDS in Emali. The study will use questionnaires to collect data .The population for the study will comprise twenty teachers of the twenty sampled schools. The study will use descriptive research design since this is a survey research. Data will be analyzed using descriptive statistics which involvetabulation of data into tables, percentages.
