ABSTRACT

The main aim of this research is to do an analysis as to why Chemistry is poorly performed than other subjects; a case study of Teso North Sub-County. The researcher will try to compare factors as to why students do not perform as expected in Chemistry as compared to other subjects. It follows that many students are easily influenced by others and they end up believing that Chemistry is a hard subject. Also, the culture in Teso North Sub-County promotes gender bias in the society. There is a general believe that certain gender cannot perform better than the other in school. The research design will be descriptive which will aim to build and widen the scope of prior research. The data shall be collected from both primary and secondary data sources and hence the data collected shall be analyzed using descriptive statistics.
