THIS PROJECT IS PRESENTED IN PARTIAL FULFILMENT OF  
REQUIREMENTS FOR BACHELOR IN BUSSINES  
INFORMATION TECHNOLOGY (BBIT) AT MT.KENYA  
UNIVERSITY.

OCTOBER, 2013

## **ABSTRACT**

Parking spaces are quickly becoming an issue in all major cities and towns in our country. This is because country is experiencing an increase in the number of vehicles on the roads i.e. Individual car owners, company cars and the public service vehicles. This has also seen the rate of petty crimes and vandalism rise sharply. It's due to these factors that investors are coming up with car park businesses to tap this emerging market as car owners look for convenience and security. The goal of this project is to give investors a system that will ease their work by helping them keep record of available spaces automatically, monitor members details and payments.
