FULFILLMENT OF THE REQUIREMENT FOR DIGREE IN
BUSINESS MANAGEMENT AT THE MOUNT KENYA
UNIVERSITY**

SEPTEMBER 2016

ABSTRACT

The purpose of the study was to establish the factors affecting inventory control in an organization.

The case study of Hulugho Wholesalers in Garissa. The research used descriptive research design in collecting the data from the respondents. The design was preferred because it is concerned with answering questions such as how much, what, which and who, thus answering phenomenon in its current state. A descriptive study was carefully designed to ensure complete description of the situation, making sure that there is a minimum bias in collecting of data and reduce errors in interpreting the data collected.

The researcher used stratified random sampling procedure to select a sample that represents the entire population. The researcher further continued to ensure each person in the strata has an equal chance of being chosen. This procedure is preferred since all the target population have an equal chance of being selected.
