Abstract

The researcher having taught Agriculture for three months in secondary school, a special interest and love for the subject developed. This interest made him to carry out a study on students attitudes towards agriculture.

This study was guided by four research objectives:

- To find out the attitude of students towards agriculture.
- To examine whether rural life influences the students' attitudes towards agriculture.
- To find out whether the students know the value of studying agriculture in their lives.
- To find out the influence of teachers on students attitudes towards agriculture education

The researcher used survey design. The target population was students and teachers of Nyangwa Boys School in Mbeere South. In the collection of data the researcher used questionnaires. The data was analyzed using frequencies

This study found out that majority of students of Nyangwa boys, have positive attitudes towards agriculture. This has been facilitated by the following: good parents, study
