ABSTRACT

Today, most of the students from secondary schools who do not qualify to join universities get stranded since they are not informed of the available options for the continuity of their education one of those options to university studies is technical education. The purpose of this study is to investigate the scope of career guidance in secondary school students with regard to technical education the focus is in district secondary schools since they are the school which admits students being the last after national and provincial intakes have been done. Those students who get admitted in district public schools are the average one hence the need for appropriate career guidance.

Kibirichia zone is selected because it has that kind of schools majority of them being day. The main idea here of the study is to find out if those students are given career guidance to technical education and determine the challenges faced by career teachers the target population is secondary school students and the sample will be derived from form four students in public district secondary schools in kibirichia education zone.
