ONLINE VOTING SYSTEM FOR COLLEGE:

(Case study of State College)

BY: MURIITHI LILIAN MUTHONI

BBIT 000103/112/09922

This project is submitted in partial fulfillment of requirement for the Mount Kenya University award of BACHELOR OF BUSINESS INFORMATION TECHNOLOGY

ABSTRACT

Information Technology has become one of the fast growing industries in today's era. The discovery of the importance and need of information in voting systems has increased the need of computers to collect, process, store and communicate information to the users.

The use of computers has increased efficiency in storage and maintenance of data and information thus increasing the efficiency, confidentiality and security of the system. Computers have helped in reducing considerably the time and energy used in data processing, storage and retrieval.

Although computers also have their demerits, for instance they reduce the employment opportunities and also the initial installation cost is prohibitive, they still remain useful and important in the system.
