REQUIREMENTS FOR THE AWARD OF BACHELOR OF BUSINESS
INFORMATION TECHNOLOGY AT MOUNT KENYA UNIVERSITY**

ABSTRACT

Salym dental clinic management system is a system which will be used in salym dental clinic. This system will be able to manage all the patient records in the department. This system will help the two dentists involved to keep track the patient dental problems, from time to time. It will allow dentist to help patients to improve their awareness and take care about their oral health. By capturing all patient treatment data, it will help dentist to keep track patient condition and to confirm for next appointment. From the data, a report can be generating by this system to summarize all patient dental score. Besides that, the data regarding the patient dental information will also help the patient in order to apply for the next treatment and also to be use for the future. In addition, this System will able to come out with statistic report regarding the number of patient visits to the clinic in a month and a year period. This information is important to the clinic department, as they can do analysis based on the number of patient visits.
