## **ABSTRACT**

This study intended to find out the effect of immunizable diseases on pre-scholars attendance in public school in public pre-schools in Kanthiari/ Antubochiu ward in Meru County.

The findings were used to establish the effects of immunization to pre-scholars attendance who are between 2<sup>1</sup>/<sub>2</sub> years to 5 years.

Immunization is an exercise carried out by the ministry of Healthy Occasionally

The main intention is to vaccinate pre-scholars attendance against various deadly diseases.

The researcher adapted survey design in the research data. It was analysed using tables, pie charts and graphs.
