## ABSTRACT

The main purpose of this research is to find out the effectiveness of strategies employed by church sponsored schools in the provision of quality and holistic education in rural areas, specifically in Kahuro area of Murang'a County. Simple random and purposive sampling techniques will be used. The stratified and simple random sampling procedures will be used to arrive at the sample of teachers, while purposive sampling was used to select the head teachers. Questionnaires will be used to collect data from teachers; a semi-structured interview schedule will be used with the head teachers. Quantitative data will be coded and analyzed using SPSS, version 16.5 for Windows and presented in frequencies and percentages in tables and graphs. The qualitative data will be analyzed and categorized in themes in accordance with research objectives and will be reported in a narrative form. The inferential statistics model to be used in data analysis in this will mainly be Analysis of Variance (ANOVA)
