IN MOUNT KENYA UNIVERSITY.**

OCTOBER 2014

ABSTRACT

The aim of the study was to assess the impact of school feeding program on curriculum implementation among the pre- school children in Juja location.

The study was based on the following aspects of research questions;

School enrolment and attendance among the pre-school age group.

Malnutrition status of children in pre- school.

Cognitive or academic performance of the children in pre-school or who are enrolled in ECDE centers'.

In carrying out this research, the researcher used the survey design which he found convenient because the study involved collecting information from a large population.

The research instruments used were; survey design and questionnaires, interview and focused group discussions as the tools to collect data. The collected data will be presented in tables, graphs and pie charts

Children should be provided with food through school feeding programs. Parents should be educated on the need to roll out school feeding programs and government should support them by availing more financial support to schools through the free primary education kitty.
