Abstract

During a chat with my Head of Department one day, I realized the immense work he has after we have done our exams, until we receive our results in the next semester. I took to find out why this is so, why the delay? And what can be done to make work easy for him, because it seemed all the bulk of the examination process was on his shoulders. This Examination Processing Information System is meant to hold students' results, which are typed in by their lecturers from wherever they are, via internet by logging in to the institution's website. Students can also log in to the same system, from whatever their location and view their results. As well as having other segments concerned with the exam processing such as units, schools, courses and departments registration. In addition, this system sums up the inserted values (assignments, CATs and Exams) to give the total overall marks and grades them.
