1.0) CHAPTER ONE

1.1) INTRODUCTION

The introduction of online dating system is an advancement of the new generation where it offers a chance and an opportunity to all people of all walks of life to have a common platform to mingle, share diverse ideas, and bring people who have common interest in life together for a chance to find companionship or a long life full of joy and happiness together.

1.2) BACKGROUND OF THE STUDY

The development of the system has been propelled by many factors such as the fact that many people are so much occupied with activities that limit them meeting and socializing in face to face way of communication hence resulting to other means to find networking, love, and friendship from other parties looking up for the same attributes. Other factors are the fact that many people don't have enough self-esteem to approach other parties and network thus compelling for alternative networking solutions.

1.3) PROBLEM STATEMENT(S)

Here in the online date matching system, a detailed study of existing system is carried along with all the steps in system analysis.

- ❖ Lack of security of data.
- ❖ Inaccuracy of data.
- ❖ Time consuming as one waits for a feedback.
- ❖ Impersonation of applicants' data.
