**Project submitted in partial fulfillment of requirement for the Mt Kenya University
award of BACHELOR OF BUSINESS INFORMATION TECHNOLOGY.**

ABSTRACT

The growth of information technology industry has encouraged many organizations to come up with new techniques to solve their customer requirements and to ease tasks. This can be viewed as use of online systems. They allow customers to conveniently interact with the store front of various ventures.

This report presents a project on Venue Reservation System website, which facilitates customers to book online, venues that are located in different areas. These are locations for significant events such as stadiums, Halls, playgrounds, wedding grounds and so on.
