**A Project report submitted to the Department of Information Technology in the School for Pure and Applied Science in Partial fulfillment for the requirements of the Bachelor of Business Information Technology, Mt. Kenya University.**

## **ABSTRACT**

This project dwells on the design and development of women group information management system. The main objective of this project is to identify satisfactorily the needs of the group while keeping costs within reasonable limits. This system tackles issues related to information management systems in order to give the businesses a competitive edge.

The literature review provides a detailed overview about Information management; why business need to manage their information, benefits and objectives of information management and best practices in information management. It goes on to further discuss what information management system is all about and detailed explanation of the benefits and the future of information management in business.

In the review, various factors for implementing efficient information management systems are listed in order to understand fully how to design and develop a software solution for the group intended to provide the best services and effective solution to their current problems. The report also discusses some challenges faced by most information management system in providing businesses with an effective solution.

Based on knowledge gained from the literature review, a proposed solution has been presented to resolve the issues with the group's current system of managing information.
