PROJECT TITLE: NYERI DAIRY SYSTEM

BY: SIMON KARANJA

Reg Number : BBIT 111/02852

This project is submitted in partial fulfilment of requirement for the Mount Kenya University award of BACHELOR OF BUSINESS INFORMATION

TECHNOLOGY

ABSTRACT

Computers in organizations are highly relied on for provision of easy, accurate and efficient means of collecting, manipulating, storing and retrieving organization information. Computers enhance the organization's information security.

Computers have certain limitations such as its initial cost, unemployment; need to teach users on how to use it among others are highly outweighed by its benefits. Computers have advantages such as creation of job opportunities (fields like Analysis, programming, computer engineering to mention a few), fast, accurate and efficient in its working and enhancement of information security in an organization, thus used widely worldwide.

In winding up computerizing any organization system should not be viewed as wastage of important resources such as money or chance of reducing its employees but fairly as an easier way and a much faster one to help the organization in achieving its goals and objectives professionally and resourcefully.
